## Programmable Controller

## Compact terminal block type controller

 Superior basic performance and wealth of functionsPNP type has been added to the lineup!

## | Multi-axis positioning control

- On up to 6 axes, built-in 100 kHz high-speed pulse output function
(Transistor output type has a built-in pulse output function for 3 axes for C14, 4 axes for C30 and 6 axes for C60)
- Basic instruction (ST instruction): $0.04 \mu \mathrm{~s} / \mathrm{step}$

C14: 3-axis control

Semiconductor wafer take-out blade

C30 / C60: 4-axis control

- Max. I/O points: 300 points

One control unit connectable to up to 8 expansion units
(382 points when using FPOR expansion units and add-on cassettes)

- Up to 4 add-on cassettes can be added (for C30, C60)

## Network

- Communication port: Max. 5 channels

Support for up to 5 channels including 2 communication cassettes (2 channels type) and tool port.

- Compatible with Modbus-RTU

Compatible with master / slave of Modbus-RTU, industry standard

- PLC link

Bit data and word data can be shared (linked) via connection with FP-XH (up to 16 units).

## FP-XH Name and function of each part

## Compatibility

## Inherits FP-X technology and improves functionality

## Program

Can use existing FP-X programs
Equipped with FP-X compatibility mode.

## Expandability

Enables building systems that can be configured with
FP-X.

## Size

Dimensions larger than equivalent FP-X.
C14: $\quad$ Ratio to convention Width 26 mm 1.024 in wider, Depth 3 mm 0.118 in deeper C30 / C60: Ratio to convention Width 30 mm 1.181 in wider, Depth 3 mm 0.118 in deeper

## Programming software

## |Control FPWIN GR7 <br>  <br> "Save" time on programming with userfriendly software

Configuration, editing programming, searching, monitoring, debugging, security, etc. PLC programming demands a lot of time and effort.
Many programmers get hung up on "trying out different configurations", "consulting the manual", and "re-writing repetitive code blocks".
The "Control FPWIN GR7" programming software is designed to eliminate these inefficiencies and minimize programming complexity.

## Control FPWIN Pro7

Programming software of PLC open certification corresponds to FP7.

Control FPWIN Pro is the Panasonic programming software developed according to the international standard IEC 61131-3. Control FPWIN Pro is the universal software for all Panasonic PLC's and ELC500 control unit.

- Programs written in Control FPWIN Pro6 or earlier versions will run with Control FPWIN Pro7.
- Programs are compatible across FP series PLCs, e.g. FP0R will run with minor adjustments on FPE (Sigma) and FP7 PLCs.
- Control FPWIN Pro7 offer the same flexible choice of editors and allow you to select the programming language you are most familiar with.

## AFPXHC14

Notes: 1) When changing the system register No. 0 (sequence program capacity), the data register (DT) capacity will also change.
2) The number of points in the table is the number of points of operation memory. The number of points actually available to be used is determined by the hardware configuration.
3) Can be selected by the setting of the system register No. 1 (internal relay capacity) To provide compatibility with the conventional FP-X series control unit, select 4,096 points.
4) The number of timer points can be changed by the setting of the system register No. 5 .
5) The maximum counting speed and maximum output frequency for the high-speed counter, pulse output and PWM output indicate the specifications for the voltage of 24 V DC and ambient temperature of $+25^{\circ} \mathrm{C}+77^{\circ} \mathrm{F}$. The frequency may decrease depending on voltage, temperature or combination of functions used.
6) The inputs and outputs used for each function of the high-speed counter, pulse output, PWM output, pulse catch input or interrupt input cannot be allocated in duplication
7) Battery lifetime values is calculated when the power is not completely turned on. Since the actual value depends on conditions of use, in practice, the lifetime may be shorter.
