Overwhelmingly stable

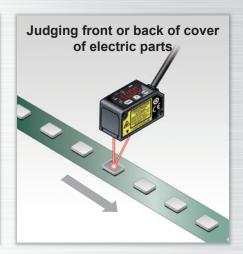

Precise measurements on the order of 1/100 mm 0.0003 inch* *HG-C1030□

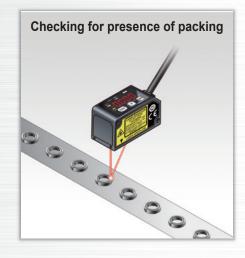

Excellent level detection performance

Repeatability: 10 μm 0.394 mil *HG-C1030

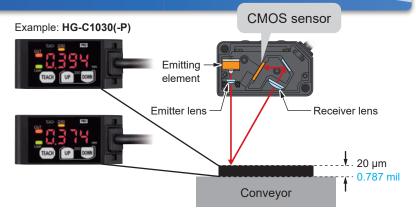

Fitted with a precise CMOS image sensor and an original algorithm

Thanks to a precise CMOS image sensor, it is now possible to perform highly precise measurements in the order of 1/100 mm 0.0003 in. The existing adjustable range reflective sensors cannot achieve such accuracy.

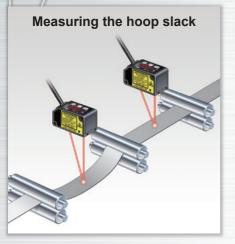

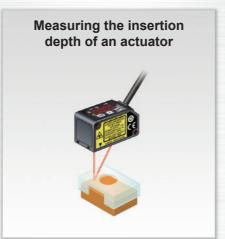

Indicates real measurements

Compact and

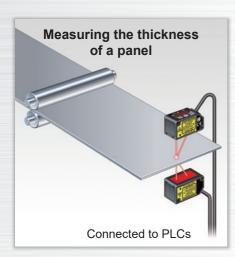

W20 × H44 × D25 mm 35 g approx. (excluding

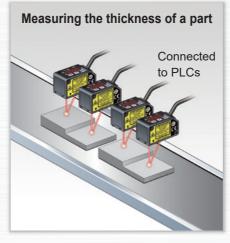

Linearity: $\pm 0.1\%$ F.S. *HG-C1030(-P) / HG-C1050(-P) / HG-C1100(-P)

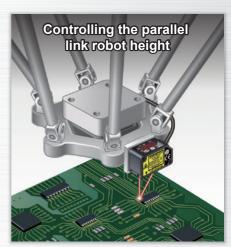

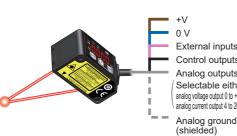

Equipped with 0 to 5 V analog output and 4 to 20 mA analog current output Excluding HG-C1000L series

The value can be measured with a distance measurement sensor.

• Linearity: ±0.1% F.S.*

• Temperature characteristics: 0.03%F.S./°C

The sensor not only indicates measured values in mm but also produces analog outputs. Various calculations and storage (logging) can be performed when output is taken into a PLC + analog unit.

External inputs Control outputs Analog outputs Selectable either analog voltage output 0 to +5V or analog current output 4 to 20 mA

Programmable controller FP0R

- FP0R-C10 control unit (with RS232C port) AFP0RC10CRS
- A/D converter unit with input channels (terminal block type) AFP0RAD8

Remove water droplets on detection surface to achieve correct measurement.

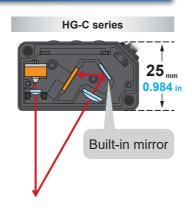

A new optical system with a built-in mirror

In general, more accurate and stable measurements can be obtained by increasing the optical path length between the light-receiving part and the light receiving element (CMOS), but this also increases the sensor depth and the sensor body gets bigger.

The **HG-C** series sensors incorporating a new optical system with a built-in mirror provides smaller sensor depth as well as higher measurement accuracy equivalent to displacement sensors.

An aluminum die-cast casing protects from strain and heat

A light-weight but strong die-cast aluminum casing has been adopted. A compact, solid body casing reduces the impact of strain and heat on the measurement accuracy.

Aluminum die-cast casing

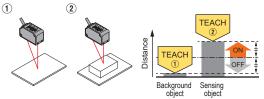

Useful functions

Teaching & window comparator mode

Normal sensing mode

2-Point teaching Basic teaching method

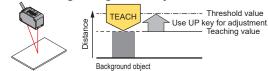

The threshold value is set automatically at the midpoint between the two points specified by teaching

Limit teaching

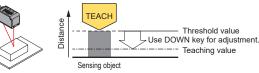

Useful teaching method for when there is a very small object or background object.

< When using background object as reference >

When the sensing object is located closer to the sensor than the background object, the threshold value for detection is set. This function is useful when there is a change in the size of sensing object.

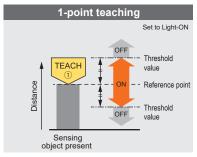

< When using sensing object as reference >

The threshold value is set on the background object side with reference to the sensing object. Use this method when there is a long distance to the background object.

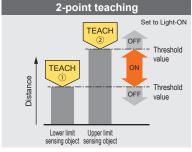

Window comparator mode

With an object below the sensor, press the TEACH key to set the valid range for distances via threshold values. There are 3 methods for setting the valid range: 1-point, 2-point, and 3-point teaching.

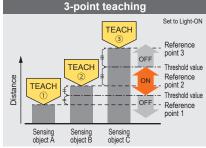

Perform 1-point teaching and the threshold range is set for the distance from the reference surface of the sensing object.

This is used for sensing within the threshold range

Press TEACH once for the lower (first point) and once for the upper limit (second point).

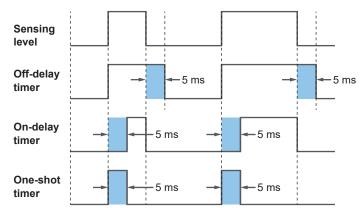

This is the method to set the threshold range by conducting the teaching at 3 points (sensing object A, B and C). After teaching, the reference points are automatically sorted in ascending order (reference point 1, 2 and 3). The thresholds are set at the midpoints between reference point 1 and 2, and 2 and 3, respectively.

Rising differential mode / **Trailing differential mode**

Use this mode to cancel gradual changes in the measured value and to detect only sudden changes. For the setting of threshold value, use the threshold value fine adjustment function.

Timer setting function

The time mode options are "off-delay timer," "on-delay timer," "one-shot timer" and "no timer." The counting time is fixed to 5 ms.*

Timer period: 5 ms (fixed)

* In the case of **HG-C1000L** series, the timer time can be changed. (See page 16)

Off-delay timer

Function: Extends output signals by 5 ms.

Usage: Appropriate in case a connected device is slow to respond and ON time is required to extend.

On-delay timer

Function: Overrides output signals for 5 ms after detection. Usage: Convenient way to override temporary signals and control with a time lag.

One-shot timer

Function: Sends output signals for only 5 ms after detection. Usage: Useful when the signal duration needs to be constant to meet inputs from a connected device. This mode is also used to extend temporary signals by a desired length of time.

Zero set function

This function compulsorily sets the measured value to "zero." The zero point can be set at a desired value. It is useful when measuring steps or tolerance with reference to the height of a sensing object.

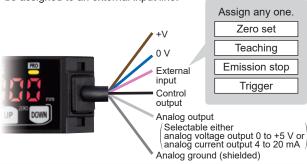

Keep pressing both keys for 3 seconds.

- * The zero set indicator (yellow) will turn ON while the zero set is valid.
- * When the zero set function is executed while the peak hold function or the bottom hold function is valid, the held measurement value is reset.
- * When the display setting is set to offset, the zero set function cannot be set.

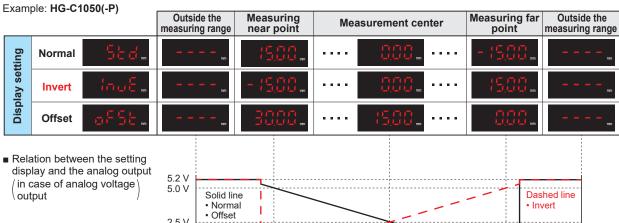

External input setting function Excluding HG-C1000L series

One of four functions, "zero setting function," "teaching function," "emission stopping function" and "trigger function" can be assigned to an external input line.

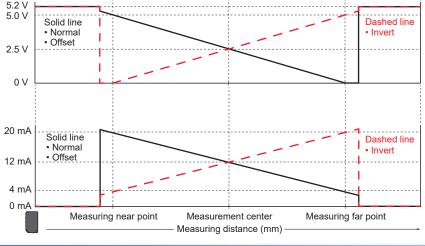

Display setting function

How to indicate measured values of the moving sensed object can be chosen from three options, "Normal," "Invert" and "Offset."

in case of analog current \ output

Peak and bottom hold functions

The peak hold function holds the maximum measured value which is output and displayed.

The bottom hold function holds the minimum measured value which is output and displayed.

- * The peak hold function and the bottom hold function cannot be set at the same time
- * When the zero set function is executed while the peak hold function or the bottom hold function is valid, the held measurement value is reset

Threshold value fine adjustment function

Fine adjustment of threshold values can be performed while measurement is proceeding on the display, and even after teaching.

Key lock function

This function protects setting conditions from unintentional changes.

^{*} For other functions and procedures for setting the functions, see the instruction manual provided with the product.

Reduction of the data analysis burden - one small step towards IoT.

IO-Link Compatible, Self-monitoring type | HG-C1000L SERIES | Self-Monitoring Sensor

IO-Link compatible

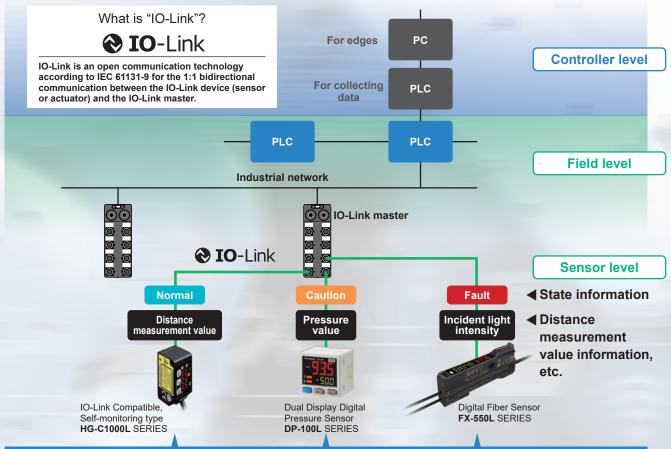

Collecting sensor level data

Field data collected and accumulated for "preventive maintenance" and "operation monitoring".

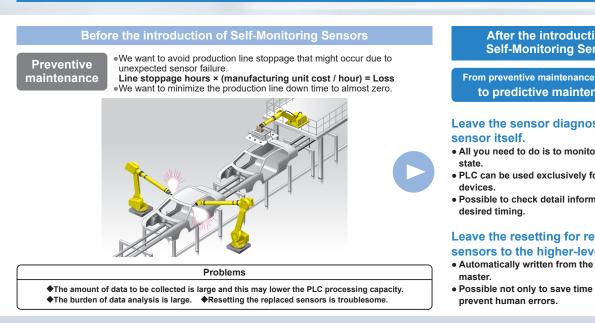

An analysis of such field data requires high-level know-how and time, causing a burden to people responsible for the production site management.

The Self-Monitoring Sensor manufactured by Panasonic is capable of reporting sensor data and its own state to the host device through the I/O Link master.

With the Self-Monitoring Sensor, you can immediately judge the state of the sensor and easily identify the cause of failure. Thus, this sensor contributes to the reduction of the burden experienced by the client in collecting and analyzing data.

With the Panasonic's Self-Monitoring Sensor, you can leave the sensor to diagnose its own state!

to predictive maintenance

After the introduction of **Self-Monitoring Sensors**

Leave the sensor diagnosis to the

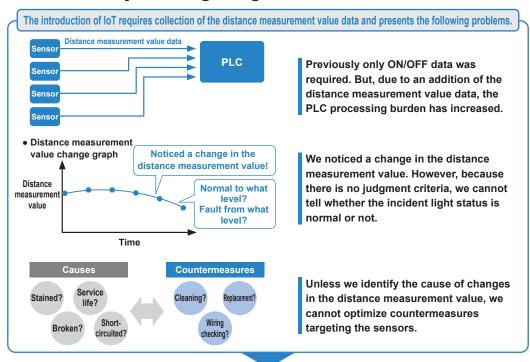

- All you need to do is to monitor the sensor
- PLC can be used exclusively for controlling devices.
- Possible to check detail information at a desired timing.

Leave the resetting for replaced sensors to the higher-level master

- Automatically written from the connected
- Possible not only to save time but also to prevent human errors.

Incorporated self-monitoring function

With the Panasonic's Self-Monitoring Sensor, you can get high-level solutions!

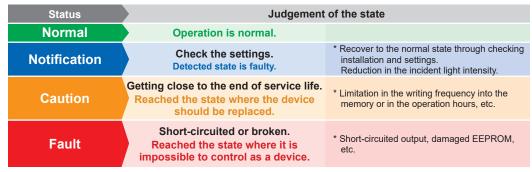

Problems are solved by the Self-monitoring function.

Self-monitoring function

A sensor with a self-monitoring function diagnoses its own state and notifies when readjustment of settings / setup is required or when maintenance is needed.

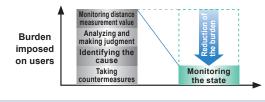

The sensor determines its status and indicates "Normal," "Notification," "Caution" or "Fault." When not in normal status, the sensor checks the cause of problem and corrective measure, thus reducing equipment downtime and maintenance workload.

■ Self-monitoring function: Four types of status indication and judgment of state

^{*} By creating a program with a PLC, etc., the "State" of the self-monitoring sensor can be grasped.

Easy use of IoT

"Predictive maintenance" can be easily achieved through monitoring the state of the Self-Monitoring Sensor.

Notes: 1) Supply voltage: 24 V DC, ambient temperature: +20 °C +68 °F, response time: 10 ms, and analog output value of measurement center distance are

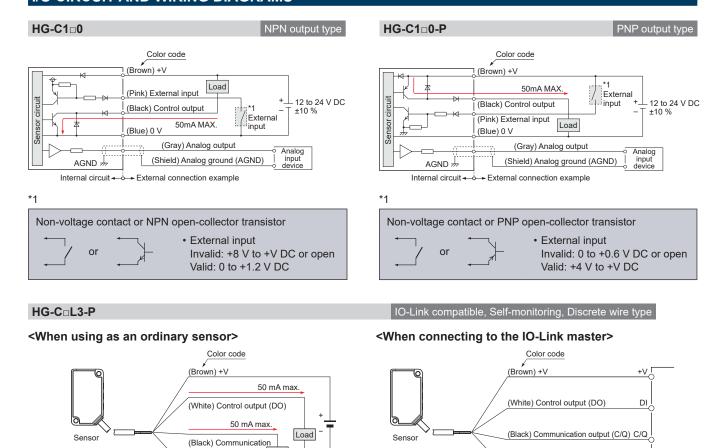

used for unspecified measurement conditions. The subject is white ceramics.

2) This product complies with the FDA regulations (FDA 21 CFR 1040.10 and 1040.11) in accordance with FDA Laser Notice No. 56, except for complying with IEC 60825-1 Ed. 3.

³⁾ This is the size in the measurement center distance. These values were defined by using 1/e² (13.5 % approx.) of the center light intensity. Due to leak light outside the specified area, the reflectance around the detecting point may be higher than at the point and this may affect the measurement value.

4) When the sensor is used as an ordinary sensor, the communication output (C/Q) provides the same output operation as the control output (DO).

I/O CIRCUIT AND WIRING DIAGRAMS

Note: When the sensor is used as an ordinary sensor, the communication output (C/Q) provides the same output operation as the control output (DO).

PRECAUTIONS FOR PROPER USE

• This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.

· Never use this product as a sensing device for personnel protection.

· In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

 Do not operate products using methods other than the ones described in the instruction manual included with each product. Control or adjustment through procedures other than the ones specified may cause hazardous laser radiation exposure.

- This product is classified as a Class 2 Laser Product under IEC / EN / JIS / GB / KS standards and FDA * regulations. Do not look at the laser beam directly or through an optical system such as a lens.
- The warning label (English) is attached to the product. Handle the product according to the instruction given on the warning label. (The warning labels in Japanese, Korean and Chinese are packed with the sensor.)

*This product complies with the FDA regulations (FDA 21 CFR 1040.10 and 1040.11) in accordance with FDA Laser Notice No. 56, except for complying with IEC 60825-1 Ed. 3.

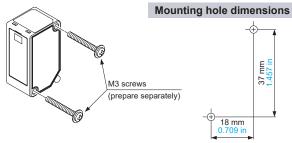

Part description

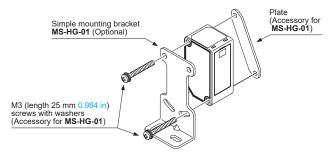

PRECAUTIONS FOR PROPER USE

Mounting

· When mounting this product, use M3 screws. The tightening torque should be 0.5 N·m. Please prepare M3 screws separately.

· When mounting the simple mounting bracket (optional) on this product, the tightening torque should be 0.5 N·m or less.

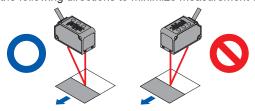

Note: Due to the simple mounting bracket, the sensing characteristics may not be hold depending on the installation condition, in case of the purposes for acquiring the displacement data and a fine detecting.

Mounting direction

Direction to a movable body

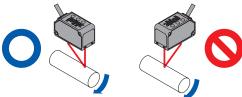

<When there are differences in material and color>

· When performing measurements of moving objects with excessively different materials and colors, mount the product per the following directions to minimize measurement errors.

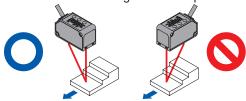

<Measurement of rotating objects>

· When measuring rotating objects, mount the product as follows. Measurement can be performed with minimized effect on the object caused by up / down deflection, position deviation and etc.

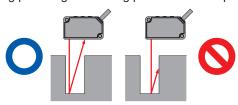

<When there is a step>

· When there is a step in the moving object, mount the product as follows. Measurement can be performed with minimized effect from the edges of the steps.

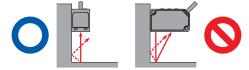

Measuring of narrow locations and recesses

· When measuring in narrow locations or inside holes, mount the product so that optical path from the lightemitting part to light-receiving part is not interrupted.

· When mounting the product on a wall

• Mount the product as follows, so that the multiple light reflections on the wall do not emit to the light-receiving part. When the reflection factor on a wall is high, it is effective to use a dull black color.

Others

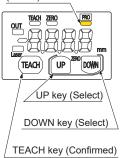

- · This product has been developed / produced for industrial use only.
- Make sure that the power supply is OFF before starting the wiring.
- If the wiring is performed incorrectly, it will cause a failure.
- Do not run the wires together with high-voltage lines or power lines, or put them in the same raceway. This can cause malfunction due to induction.
- · Verify that the supply voltage variation is within the rating.
- · If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- If noise generating devices (switching regulators, inverter motors, etc.) are used around the sensor mounting area, make sure to connect the frame ground (FG) terminal of the device.
- Do not use this product during the transient state when the power supply is turned ON.
- The overall length of the cable can be extended to 10 m 32.808 ft maximum (HG-C1000L series: 20 m 65.617 ft maximum) with a cable size of 0.3 mm² or more.
- · Make sure that stress by forcible bend or pulling is not applied to the sensor cable joint.
- · Although it depends on the type, light from rapid start type or high frequency lighting type fluorescent lights, sunlight and etc. may affect the sensing, therefore make sure to prevent direct incident light.
- This product is suitable for indoor use only.
- · Keep water, oil, fingerprints and etc. which reflect light, or dust, particles or etc. which interrupts the light, away from the emitting / receiving surfaces of this product. If contaminants adhere to the surface, wipe off with a dust-free soft cloth, or lens cleaning paper.
- · Do not use the sensor in locations where there is excessive vapor, dust or etc. or in an atmosphere where corrosive gases, etc. is generated.
- Take care that the product does not come in contact with oil, grease, organic solvents such as thinner, etc., strong acid or alkaline.
- Make sure to turn OFF the power supply, before cleaning the light emitting / receiving windows of the sensor head.
- · There is a certain deviation in the directionality of this product. Install the product using a mounting bracket or similar fitting to allow the adjustment of optical axis.
- The internal memory (nonvolatile) of this product has a service life. Settings cannot be configured more than 100,000 times.

PRECAUTIONS FOR PROPER USE

Hold setting	oFF	Set the control output and the analogue output operation when a measurement error occurs (insufficient light intensity, saturation of light intensity, out of measurement range). " FF ": Hold OFF, " n": Hold ON
ECO setting	oFF	The digital display can be set to go OFF when key operation is not performed for 30 seconds. Current consumption can be reduced. " OFF ": ECO OFF, " ON ": ECO ON
Reset setting	na	Return to the default setting (factory setting). " ": Reset NG, " ¥55": Reset OK

PRECAUTIONS FOR PROPER USE

Error indication

• In case of errors, attempt the following measures.

Error indication	Description	Remedy	
<hold off=""> <hold on=""> Measured value blinks</hold></hold>	Insufficient amount of reflected light. The sensing object is out of the sensing range.	Confirm that the sensing distance is within the specification range. Adjust the installation angle of the sensor.	
E-01	Nonvolatile memory is damaged or is past its life expectancy.	Please contact our office.	
E- 11	Load of the sensing output is short-circuited causing an over-current to flow.	Turn OFF the power and check the load.	
8-21	The semiconductor laser is damaged or is past its life expectancy.	Please contact our office.	
8-31	When zero set is set, the measurement is not performed normally. Since the display setting is set to "Offset", the zero set function can not be used.	Confirm that the sensing distance is within the specification range. Set the display to any setting except "Offset."	
EHM I	During teaching, the measurement is not performed normally.	Confirm that the sensing distance is within the specification range.	
6-93 6-93 6-90 6-91	System error	Please contact our office.	

Event function (HG-C1000L series)

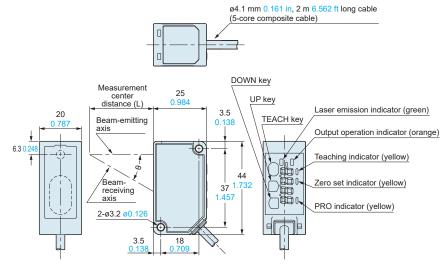

Error indication	Event code	Error level	State
